Algorithm 1 Streak Yes or No?

Set $t = 2$ (minutes)

Call $t_1, t_2, ...t_T$ the end times of each possesion

For every k find $\bar{k}$ such that $\lfloor (t_{\bar{k}} - t_k) \rfloor = t$

Let $H(t_k) =$ Home team Points$(t_k) -$ Away team Points(t_k)

for $k \in \{1, ..., \lfloor T - t \rfloor\}$ **do**

    Compute $m = min(\{H(t_k), ..., H(t_{\bar{k}})\})$ and

    Compute $M = max(\{H(t_k), ..., H(t_{\bar{k}})\})$

    Let R=M-m

    if $R > 6$ points **then**

        Label points in $[m, M]$ as part of the *exciting* streak

    end if

end for
